

Bursa LINK

Bursa Malaysia Berhad (“Bursa Malaysia”)’s Listing Information Network System (“LINK”) or better known as “Bursa LINK” which was implemented in 1999, provides listed issuers with a secure infrastructure for not only expedient communication and dissemination of information such as announcements to the investing public but also allows electronic submissions by listed issuers and processing of these applications by Bursa Malaysia. The Bursa LINK system:

- facilitates a more efficient and effective communication and dissemination of announcement and information to the market; and
- enables greater automation through electronic submissions of applications (e.g. clearance of circulars as well as initial and secondary listing applications).
